                                          The present sequence encodes a mutant parathyroid hormone (PTH) receptor, designated rdeltaNt. The polypeptide is characterised by a deletion of the extracellular amino-terminus ligand binding domain. The receptor has a minimal domain for ligand binding and is, therefore, useful in screening assays designed for the identification of agonists and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
                                           Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(-134) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or inhalation unlike the large mative PTH or PTH-1 which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   540

                                                                                                                                                                                                                                                                 parathyroid hormone/parathyroid hormone-related professor (PTH/PTHFP) receptor (AAR92277). To obtain R15B, a rat osteosarcoma ROS 17/2.8 cDNA library in pcDNA1 was used to transfect COS cells, and transfectants were selected for ability to bind labelled PTH. Recombinant receptor is produced in vector/host cell systems. The host cells can be used for diagnostic measurement of PTH serum levels. Transgenic chickens that overaxpress the receptor in their oviduct lay eggs of higher calcium content. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                      This sequence encodes the rat parathyroid hormone (PTH) receptor RiSB, which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia
                                                                                                                                                                                                                                                                                                                                                                                                                              672
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   552

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to parathyroid hormone (PTH) receptor and its corresponding nucleic acid sequence. The parathyroid hormone receptor polypeptides, polynucleotides and antibodies are useful for diagnosing, prognosticating and treating disorders associated with parathyroid hormone receptors, e.g. hypercalcaemia, hyperparathyroidism, osteoporosis, carcinomas of the breast, lung and prostate, epidermoid cancers of the head and neck of the heosophagus, multiple myeloma, or hypocalcaemia. The DNAs and polypeptides are also useful for screening candidate compounds for antagonistic or agonistic effects on parathyroid hormone receptor activity. The compounds are also useful in manufacturing diagnostic agents used as diagnostic tools to diagnose hypercalcaemia and to distinguish between hypercalcaemic conditions. The present sequence is rat bone PTH/PTHTP (PTH-related protein) receptor cDNA clone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method of predicting at least one toxic effect of a compound. The method comprises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the renal toxicity of a compound, or identifying toxicity markers in tissues or calls exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polynuclectide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CTGGAGGTATTTGACCGCCTAGGCATGATCTACACGTGGATACTCCATGTCTCTCGCC 132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             transform E. Coli contg. a larger helper plasmid by The cells were transform E. Coli contg. a larger helper plasmid p3. The cells were cransform E. Coli contg. a larger helper plasmid p3. The cells were screened to isolate those expressing functionally intact ROS cell parachyroid hormone/parathyroid hormone related protein (PTH/PTHP) receptor proteins, performed according to Gearing et al., (EMBO J. 8: 3676, 1989), by identifying colonies capable of binding a sustable radiolabelled ligand. The clone encodes a protein which may be used in the level of calcium in the blood. Cpds. capable of competing with PTH or PTHP for binding can be identified using the protein prod. and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in hypercalcaemia. Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.

Claim 151; SEQ ID NO 1426; 542pp; English.

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR.related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising of GPCR gene of the invention; a mouse comprising of mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived to probes which hybridise to GPCR polymucleotides of the invention. The comprising a mutation in a different GPCR polymucleotides of the invention. The comprising a mutation further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid The GPCR polypeptides and vectors comprising a GPCR nucleic acid The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, disease, disorders of the colon or intestine of disorders of the adrenal gland; disorders of the colon or intestine of sorders of the adrenal gland; disorders of the colon or intestine of syndrome); cardiovascular disorders (e.g., autoimmune disorders or mycardial infarction); immune disorders (e.g., autoimmune disorders or AlDS); bone and joint disorders (e.g., autoimmune disorders (e.g., autoimmune disorders (e.g., autoimmune disorders (e.g., cancais and disorders of the kidney, liver, lung, breast, ovary, chencing diseases); and disorders of the kidney, liver, lung, breast, covary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCR-related

```
portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R_1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, tracting diseases and disorders associated with decreased tetherl activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTH PW which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ACAGAGGAAGAGTIGCACATCATCGCGCAGGTGCCACCTCCGCCGGCCGCTGCCGCCGTA 360

Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence; not R is (a portion of) PTH-1 receptor characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing CAMP non-peptide PTH (claimed). The new compound can be administered by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inhalation unlike the large native PTH or PTHrP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or inchalation unlike the large native PTH or PTH-1 which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ų,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Arcecceaedcecececececeraceaedececececearacecederaceceaed 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            141
